

Reference Letter for MAKS FAN COIL TABLET

Date: 24.06.2025

To Whom It May Concern,

I am writing to provide a reference for **MAKS FAN COIL TABLET**, a product we have recently used in our fan coil units.

We initially sought a solution to prevent biofilm build-up, which can lead to bacterial growth, unpleasant odors, and potentially damage our systems. **MAKS FAN COIL TABLET** has proven to be an exceptional choice for this purpose. These tablets are incredibly easy to install and have provided long-lasting protection to our units.

Here are some key benefits we've experienced:

- **Effective Biofilm Prevention:** The tablets continuously release into the condensate wastewater, forming a protective coating on all surfaces, preventing biofilm formation and microbial activity that could lead to odors and system inefficiencies.
- **No Residue:** The tablets are 100% water-soluble and leave no residue, making maintenance effortless and ensuring there's no impact on the system's efficiency.
- **Odor Control:** The tablets effectively eliminate odors, creating a cleaner and more pleasant environment around our units.
- **Corrosion Protection:** The tablets protect our systems from biofouling, corrosion (MIC), and white rust, extending the life of the equipment.
- **Additional Client Benefits:** Our client also observed the elimination of slime, pipe clogging, and prevention of overflow from the drain pan, which helped preserve the ceiling and carpet from potential mess and damage.

After using the **MAKS FAN COIL TABLET**, we have observed significant improvements in the performance and cleanliness of our equipment. We are confident in recommending this product to others looking for a reliable and long-term solution for biofilm prevention, odor control and legionella pneumophila.

Sincerely,

A handwritten signature in black ink, appearing to read 'Silverio D. Capino', is written over the printed name.
